DENISON STATE BANK

Meriden Branch Remodel Project

COMPLETED in Oct. 2026

Take a look at the remodeled branch, built for a better customer and employee experience . . .

New front exterior: entrance/exit was relocated to east side of parking lot.

(continued on next pages)

West side: turf mounds were shaved down for better water drainage.

Drive-up teller was moved further down the south wall: new window for Lane 1, new tube unit for Lane 2. Night deposit drop remains. The ATM in Lane 3 was installed last year 2025.

The old front entrance was bricked over.

This vinyl covering is mounted on the interior side of the wall where the old entrance door was located. The image of rolling Kansas hills is stock photo, not local photography.

New highway K-4 sign.

Welcome in to the entrance, foyer and lobby, with ADA accessible doors.

First view upon entrance:

New teller line: 2 stand-up stations, 1 ADA sit-down station:

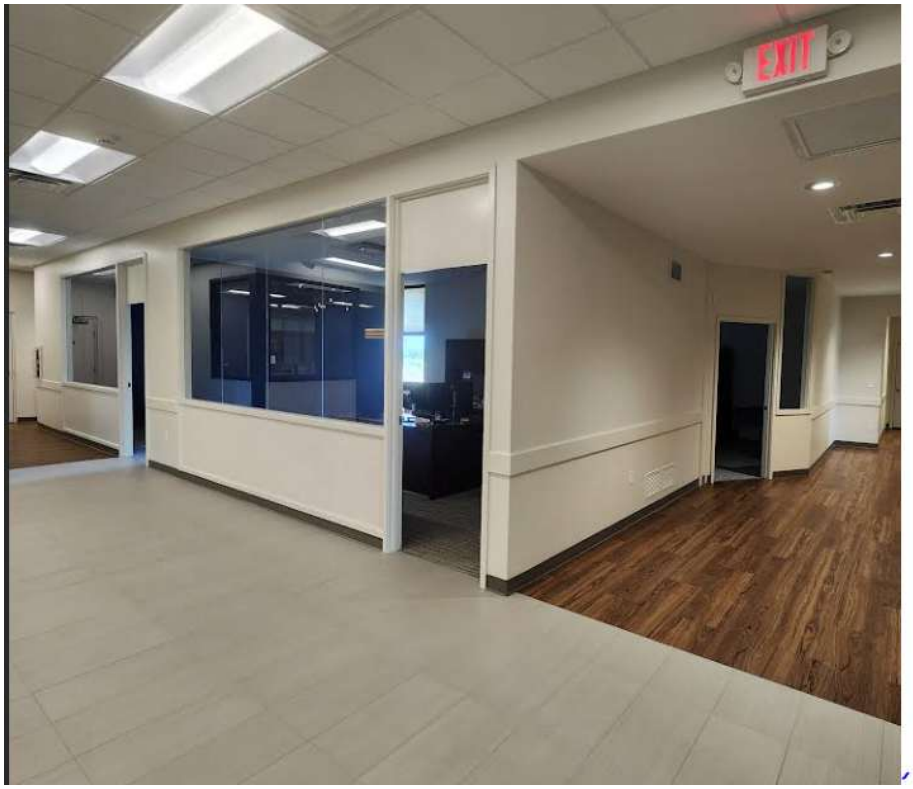

Offices of CSRs Shane and Summer are now semi-enclosed. The aisle in middle allows customers to access the vault for safe deposit boxes.

Branch manager Gayla office can be fully enclosed with 2 doors, big glass window to see into lobby/tellers/entrance.

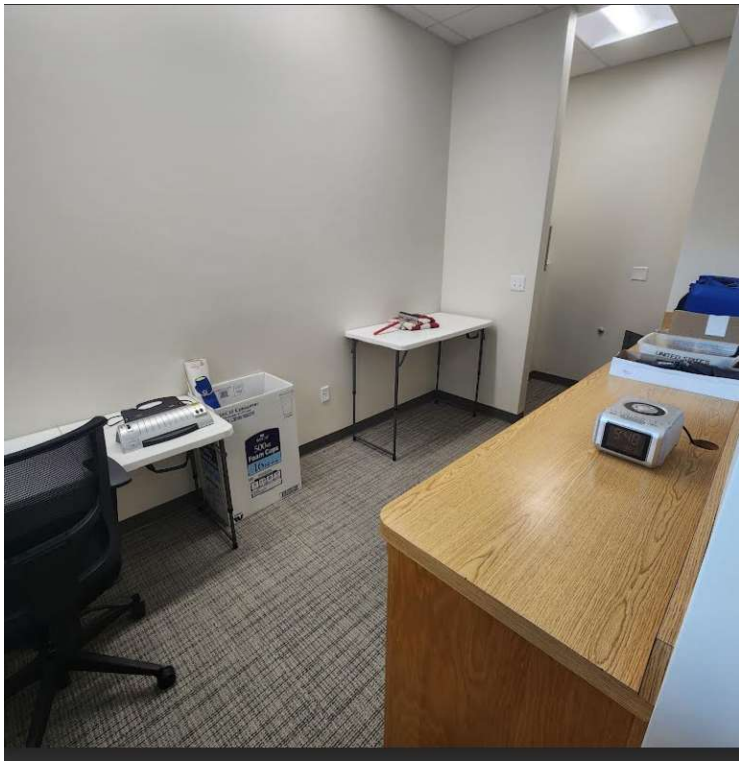

No structural changes to the offices along the wall, but new finishes added.

The new drive-up teller stations with drawer for Lane 1 and tube for Lane 2.

There is no indication on this wall that the old drive-up teller window and tube used to be there, down in the "pit." The night deposit box remains in same location behind that wall partition.

The room for the Western Jefferson Historical Society has new flooring.

The Meriden remodeling was performed by:

NewGround International, St. Louis:
project architect and construction project manager

Kelley Construction Co. Inc., Topeka:
construction general contractor

Local and regional sub-contractors

DSB employees
